

WHAT TO DO TODAY

Ensure field drainage

Improve drainage to prevent **waterlogging** and reduce fungal disease risk (e.g. Alternaria) at flowering.

Skip irrigation this week

Soil is **Moderate Wet** and appears saturated — no irrigation needed for 7+ days. Focus on drainage.

Scout for sucking pests

Inspect for **aphids**, **jassids**, **whiteflies** before they cross thresholds; apply 2% DAP / 1% KNO₃ for boll retention.

AI OVERVIEW — 16-DAY OUTLOOK

Over the next 16 days, Farm (Gandhinagar) will see **23.4 mm** of rainfall over **3 rainy days**, with a light **13.5 mm** fall expected around **04 Sep** (~10 days out). Temperatures range **25.6–34.9°C**; humidity stays high with moderate winds.

Soil moisture shifts from **Moderate Wet** to **Abnormally Wet** by period end. At this **flowering stage**, prioritise drainage to prevent waterlogging; monitor sucking pests and apply **2% DAP** or **1% KNO₃** to improve boll retention.

Excess soil moisture is a significant risk to root health — monitor fields frequently for drainage needs. Overall outlook: **CAUTIONARY**
